

Project 2

Course Code and Name: MSJ2101 Communication and Technology

Project Name: WOMEN IN ARCHITECTURE: Merina Tabassum

Project Type: Blog Post

Project Theme: N/A

Semester of Submission: Fall 2022

Project Description:

This project is a blog highlights her achievements, architectural philosophy, and contributions to both Bangladesh and the international community. It also discusses how her work reflects Bangladeshi culture and how she has inspired many women to pursue careers in architecture and other professional fields. Through this blog, I aimed to introduce readers to her journey and emphasize the importance of women's empowerment in science, technology, engineering, and creative professions

Project Justification:

Women continue to face challenges in many professional fields, including science, technology, and architecture. Marina Tabassum's success demonstrates that talent, dedication, and creativity can overcome social barriers. Writing this blog helped raise awareness about gender equality and celebrated the achievements of a Bangladeshi woman who has represented the country internationally. The project also encouraged readers to recognize the importance of creating equal opportunities for women and inspired young people to follow their dreams regardless of gender.

WOMEN IN ARCHITECTURE: Merina Tabassum

What is Architecture? Architecture is really the art of taking the moments of a culture-its people, its language and its customs and turning them into a work of art that embodies those values. Architecture as opposed to construction skill, is the art and technique that satisfies both function and expressive need, serving both utilitarian and aesthetic goals. There are many architectures in our country. Those who have presented the country to the world at a higher peak. One such architecture is Marina Tabassum.

.Most well-known for its intensity and simplicity is Marina Tabassum's architecture. She had a significant part in the creation of the Bangladesh Independence Monument and the Museum of Independence, both of which were completed in 2013, as a co-founder of Urbana, the company she co-founded with Kashef Chowdhury and ran from 1995 to 2005 before beginning her own practice. She established the MTA company and oversaw the construction of the affable, sun-dappled Bait Ur Rouf Mosque, winner of the Aga Khan Award. In Free space, the main exhibition of the Venice Biennale for Architecture, she participated the previous year, exploring the Bengali courtyard, a subject connected to a project she's currently working on in Dhaka with villagers to

build their own \$2,000 homes. Maria Tabassum's most beautiful and aesthetics architecture are share:

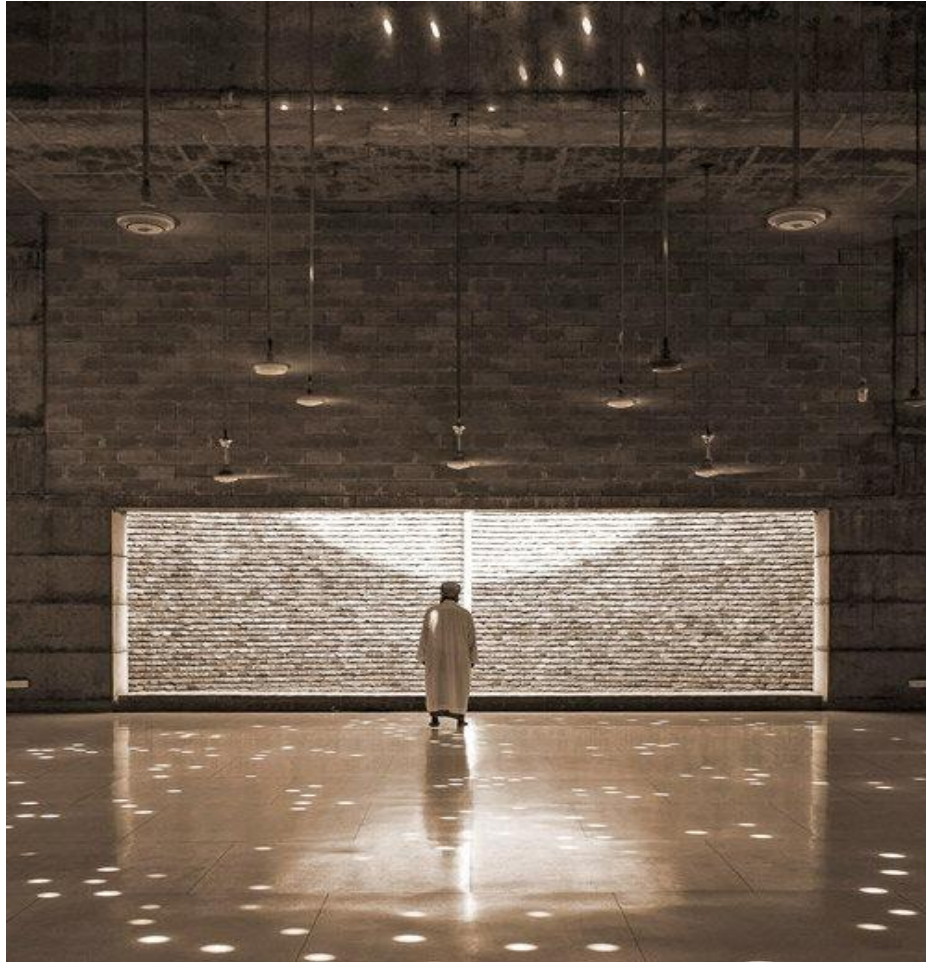

- The underground Museum of Independence in Dhaka was created by Marina Tabassum.
- Located in Dhaka, where MTA is situated, is the Comfort Reverie building.
- Brick, a typical building material in Bangladesh, was utilized to construct Tabassum's Bait Ur Rouf Mosque.
- When necessary, owners of the Khudi Bari can sleep on a higher level.

The opening of the Bait Ur Rouf mosque in Dhaka, the MTA's first commission, in 2012 brought the early lessons Tabassum had learnt about light full circle. The fact that the project began so soon after the architect's mother passed away in 2002 and that her grandmother had donated the land for the mosque made it very meaningful to her personally. The architect claims that the

mosque's architecture was inspired by the grandma and granddaughter's yearning for recovery. In December 2006, a little while after the Bait ur Rouf Mosque's construction site was officially opened, my grandmother passed away. To learn about the foundational tenets of Islam, the Bait ur Rouf Mosque was created. Light itself is used to beautify an unadorned brick building. She obtained

Tabassum describes it best herself: “Architecture should be designed in such a manner that people can tell what place it belongs to. Even though we have many modern methods to cover a vast roof, through time this has grown to be a symbol we connect with mosques, according to Marina Tabassum.

"My attention was on the spiritual environment and the act of praying, not on discussing the symbolic side. I wanted my structure to emphasize the fact that we go to mosques to worship and establish a relationship with God. Tabassum's plan was straightforward: "I wanted to lose the excess weight and stick to the fundamentals. She desired to construct a building with Bangladeshi roots. "Root architecture to its site is what I like to do most of the time in my profession. Architecture must have a foundation in order to grow.

In Bangladesh ,women are advancing in various fields of science and technology,mathematics and engineering.One such successful woman is Marina Tabassum, who has won praise at home and abroad. She is an inspirational name for today's women,seeing her many girls dream of becoming a big architect. When it came to school, employment, and business, women in Bangladesh were consistently at a disadvantage. Without much alteration, this has been the situation for generations. The scenario is altering, though. Today, more and more women are able to obtain quality education because of broad incentives and facilitations. The gender balance in the workplace is another cause supported by the Bangladeshi government. There are certain women who have defied all the obstacles against them by challenging the patriarchy and becoming successful.
